

2. A computer simulation of the knitting process in the aspect of the dynamics of feeding is of great importance for the process of designing technological parameters, as well as for the mechanical designer-engineer in the process of designing warp-knitting machines from the point of view of the optimisation of modulus constructional solutions for the machine and also optimisation of the geometry of the feeding zone, and the technical parameters of the machine.

XVII Seminar and Workshop on 'New Aspects of the Chemistry and Applications of Chitin and its Derivatives'

INVITATION

On behalf of the Board of the Polish Chitin Society I have both a pleasure and an honour to invite you to participate in the **XVII Seminar and Workshop on "New Aspects of the Chemistry and Applications of Chitin and its Derivatives"** which will be held in **Warsaw, Poland, September 21st – 23rd, 2011**.

The aim of the conference is to present the results of recent research, development and applications of chitin and chitosan.

It is also our intention to give the conference participants working in different fields an opportunity to meet and exchange their experiences in a relaxing environment.

Best regards
Dr Malgorzata M. Jaworska
