

Table 5. Effect of benzyl alcohol usage on the washing and light fastness properties of dyed mohair samples (WO: Wool, PAC: Polyacrylonitrile, PES: Polyester; PA: Polyamide, CO: Cotton, CA: Cellulose Acetate).

	Dyeing Temp. – Time	Benzyl alcohol, ml/l	Washing fastness						Light fastness
			WO	PAC	PES	PA	CO	CA	
Telon Blue BRL Micro	100 °C – 90 min.	–	3	4-5	4-5	2-3	2-3	4	7-8
	100 °C – 60 min.	5	3	4-5	4-5	2-3	2-3	4	7-8
	90 °C – 90 min.	15	3	4-5	4-5	2-3	2-3	4	7-8
	80 °C – 90 min.	30	3	4-5	4-5	2-3	2-3	4	7-8
Telon Blue M-RLW	100 °C – 90 min.	–	5	5	5	4	4-5	5	7
	100 °C – 60 min.	5	5	5	5	4	4-5	5	7
	90 °C – 90 min.	15	5	5	5	4	4-5	5	7
	80 °C – 90 min.	30	5	5	5	4	4-5	5	7
Isolan Dark Blue 2S-GL	100 °C – 90 min.	–	5	5	5	4-5	4-5	5	7
	100 °C – 60 min.	5	5	5	5	4-5	4-5	5	7
	90 °C – 90 min.	15	5	5	5	4-5	4-5	5	7
	80 °C – 90 min.	30	5	5	5	4-5	4-5	5	7
Realan Blue RC	100 °C – 90 min.	–	5	5	5	5	4-5	5	6
	100 °C – 60 min.	5	5	5	5	5	4-5	5	6
	90 °C – 90 min.	15	5	5	5	5	4-5	5	6
	80 °C – 90 min.	30	5	5	5	5	4-5	5	6

Table 6. Kinetic parameters of dyeing mohair with Isolan Dark Blue 2S-GL.

Conditions of dyeing process	k, min ⁻¹	-Δμ, KJ·mol ⁻¹
100 °C – in the absence of benzyl alcohol	0,003685	-2,8636
80 °C – in the absence of benzyl alcohol	0,000871	-7,1724
80 °C – in the presence of 30 ml/l benzyl alcohol	0,002994	-3,3590

said that treating these fibres at lower temperatures will also decrease fibre damage. Furthermore it is thought that dyeing mohair fibres at lower temperatures/times could help to obtain bright colours (preserving fibre luster), which would also conserve energy.

Department of Man-Made Fibres

Research:

The Department of Man-Made Fibres has more than 50 years of history and experience in man-made fibres. The main scientific interest of the Department can be divided into several fields:

- composite interactive cellulose fibres based on NMMO,
- nanofibres from biodegradable polymers,
- advanced materials based on biodegradable polymers for medical and technical applications,
- special fibres based on advanced polymers.

The Department is equipped with advanced devices for spinning solution preparation and fabrication of fibres and nanofibres by different methods (melt state, dry-wet, wet spinning).

Cooperation:

The Department is currently looking for partners from academia or industry.

We offer:

The Department is equipped with various devices for the determination of the properties of fibres and polymers:

- thermal analysis (TGA and DSC),
- rheometers and devices to determine the melt flow rate,
- devices for determining the mechanical properties of fibres (e.g. tensile tester),
- spectrometers (FTIR, UV-vis),
- optical microscopes.
