

shock-absorbing components, which will be used for simulation of the performance of such equipment during fall arrest. These models will be a tool supporting the design of new constructions of equipment protecting against falls from a height and the methods of its installation and use.

UNIVERSITY OF BIELSKO-BIAŁA

Faculty of Textile Engineering and Environmental Protection

The Faculty was founded in 1969 as the Faculty of Textile Engineering of the Technical University of Łódź, Branch in Bielsko-Biała. It offers several courses for a Bachelor of Science degree and a Master of Science degree in the field of Textile Engineering and Environmental Engineering and Protection.

The Faculty considers modern trends in science and technology as well as the current needs of regional and national industries. At present, the Faculty consists of:

■ The Institute of Textile Engineering and Polymer Materials, divided into the following Departments:

- Polymer Materials
- Physics and Structural Research
- Textile Engineering and Commodity
- Applied Informatics

■ The Institute of Engineering and Environmental Protection, divided into the following Departments:

- Biology and Environmental Chemistry
- Hydrology and Water Engineering
- Ecology and Applied Microbiology
- Sustainable Development
- Processes and Environmental Technology
- Air Pollution Control
