Furthermore, GLCM was applied and compared with the edge frequency method. Although this method performs well, it is more computationally complicated and time consuming than the edge frequency method. Moreover, the sensitivity of the edge frequency method to the scanning direction and colour of the sample is lower than for GLCM.

INSTITUTE FOR ENGINEERING OF POLYMER MATERIALS AND DYES DEPARTMENT OF PAINTS AND PLASTICS IN GLIWICE, POLAND
presents

the 9th International Scientific-Technical Conference
ADVANCES IN PLASTICS TECHNOLOGY

DATE: 15th – 17th November 2011

VENUE: MIĘDZYNARODOWE TARGI KATOWICKIE (International Katowice Fair) KATOWICE, ul. BYTKOWSKA 1B, POLAND The Conference will be held in the Conference Hall situated in the Conference Pavilion

MAIN TOPICS OF THE CONFERENCE:

■ **Raw Material and Semiproduct Evolutions for Plastics:**
  ■ Latest developments in polymer materials: resins, biodegradable polymers, technical polymers
  ■ Pigments, fillers and plasticisers
  ■ New generation of additives, agents and modifiers
  ■ Polymer composites and nanocomposites

■ **Developments in Processing Technologies and Applications**

■ **Testing and Measurements**

■ **Recycling, Environmental Aspects, Legal Affairs**

The conference program includes over 30 papers from the following countries: Austria, Germany, Italy, Poland, Switzerland, Ukraine and The United Kingdom.

The presentations and discussions will be performed in the **English** and **Polish** languages.

For more information please contact:

Ms Anna PAJĄK – Conference Manager
Institute for Engineering of Polymer Materials and Dyes,
Paint and Plastics Department in Gliwice
ul. Chorzowska 50A,   44-100 Gliwice
